## **DETAILED ACTION**

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the closest prior art documents are considered to be Unger (US 5,585,112) and/or Klaveness (US 5,536,490), which teach a variety of lipids and pegylated lipids for use in the preparation of microbubbles and liposomes, including in combination with one another. However, one of ordinary skill in the art would not have been motivated to select specific components in view of adjacent compounds such that compounds with longer chains assemble beneath compounds with relatively shorter chains, as instantly claimed, with the expectation of achieving improved microbubble stability. The results of Table 1 of the instant specification are also acknowledged, whereby microbubble compositions including compounds having the claimed R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, X, Z, and Z' components demonstrate improved stability. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
